What our users are saying:

"NRI has been a long-term user of medical software. We used a competitor's software package for many years. When changing over to Workplace Applications, the instructional base was so user-friendly. In a matter of hours all previous data was transferred without losing valid information, which we always seemed to do previously. Reports are simpler, and the best part is being able to transmit data to Workplace Group within minutes. Workplace Applications saves time and, compared to other medical software, also saves money. Updates are sent automatically; no wait, along with documentation of all changes in the update. I recommend this software to any industry."

—Carolyn Duncan, New River Industries

"We have seven HR/Medical stations using Workplace Applications at A&E, and all users are extremely pleased with the Workplace Applications system. It is very user-friendly and provides numerous useful reports. The demographic reports are useful not only for medical recordkeeping but for HR reporting, DOL, EEOC, etc. I especially like the attendance module. We are totally dependent on it to track our leave of absences. Your system also met the approval of our HIPAA compliance attorney for confidential medical recordkeeping. Your staff has been very helpful as we went through the learning curve of a new program."

—Barbara Lawrence, American & Efird

Workplace Group also provides the following services:

- Hearing Conservation
- Industrial Hygiene
- Occupational Health
- Indoor Air Quality
- Safety
- Training

Software Solutions for the Workplace

WORKPLACE applications

Workplace Applications Software provides companies an enterprise-wide solution to their workplace health and safety data management needs. The SQL Server-based system is scalable from a single-user workstation up to hundreds of users on a corporate WAN.

Software Features

- ▶ Extensive reporting and graphing capabilities
- ▶ "User-friendly" and "easy to use"
- ▶ Export and/or email most reports from within the software through the Crystal Reports™ interface
- ▶ Send reports in Adobe's® Portable Document Format (PDF) to managers, supervisors, or clients
- ▶ Data input "wizards" guide you through the software
- ▶ Completely integrated with the Health and Safety module
- ▶ Medical spell checking in every module
- ▶ Microsoft's® SQL Server technology utilized
- ▶ Installation possible on a standalone workstation or across a company-wide WAN connected to a corporate SQL Server database
- ▶ Fully integrated with our hearing conservation, pulmonary consulting, and review programs
- ▶ Electronically submit data to Workplace Group for professional review

Benefits to you...

- ▶ Easily see the effectiveness of your safety and health programs
- ▶ Save time and money entering new data with Workplace Applications data input "wizards"
- ▶ View and share electronic reports without having to purchase special software
- ▶ Eliminate duplicate data entry through the software's integration with the Health & Safety module and Workplace Group professional review programs

Available Modules

Health & Safety

Injury, illness, examination, visits, case notes reporting, and analysis. This module is fully integrated with all other modules in the Workplace Applications Suite. Assists in determining OSHA recordability and offers detailed graphical analysis of visits and accident investigation. Contains employee's medical history and blood pressure charting and reporting.

Medical Surveillance

Scheduling and tracking of health and safety visits and examinations. Groups of employees can be monitored and scheduled for activities.

OSHA 300 Logging

OSHA 300, 300-A, and 301 reporting. Recordable events are automatically entered from the other modules into the OSHA 300 Log.

Audiometric Surveillance

Full-featured audiometric testing and analysis program. Scheduling, testing, reporting, monitoring, and tracking are included. Electronic data transfer to our Workplace Review system results in a fast turn-around time for our Professional Audiometric Review service.

Pulmonary Function

Detailed analysis and interpretation of FTP results for cotton and non-cotton plants. Direct import of pulmonary tests from spirometers. Electronic data transfer to our Workplace Review system for professional analysis.

Demographics

The demographic module contains basic employee information and supplies that data to the other software modules. Import capabilities allow for demographic integration with companies' human resource systems. Social security numbers can be used but are not required in the software. Other forms of employee identification can be used, such as employee numbers and/or a photograph. Reports, graphs, and a random list generator complete this module.

FMLA/Attendance Tracking

Manages a company's FMLA program and offers detailed analysis and reporting of all types of attendance. Individual, shift, and plant calendars track FMLA days and visually display attendance, holidays, plant shutdowns, and OSHA recordable days. Monitors and tracks individual attendance.
